www.domyos.com

Thank you for choosing a DOMYOS product and for the trust this demonstrates.

Whether you are a beginner or a high level athlete, DOMYOS is there to help you stay fit or increase your fitness. Our teams are always pushing themselves to create the best possible products for you to use. However if you have any comments, suggestions or questions, you can voice them on our website: DOMYOS.COM. On the website you will also find training advice and support.

We wish you all the best for your training and hope that this DOMYOS product will meet all your needs.

■ PRESENTATION

The WALK BY DOMYOS is a treadmill that allows you to walk at your own pace and according to your own fitness level, from 0.5 km/h to 8 km/h.

■ RECOMMENDATIONS FOR USE

Read instructions carefully and keep for future reference.

1. Check your fitness level with your medical practitioner. This is especially important for persons over the age of 35 or persons with pre-existing health problems.
2. This equipment should not be used by persons (including children) with reduced physical, sensory or mental abilities or persons lacking the necessary experience or knowledge, unless they have received prior instruction on how to use the equipment or are under the supervision of a person responsible for their safety.
3. Domyos cannot be held liable for claims of injury or damage sustained by any person or property resulting from the use or misuse of this product by the purchaser or by any other person.
4. Your home's electrical supply must be in a good state of repair and comply with current standards. This machine should be used with a 220 volt/16 amp circuit (minimum). Ensure that no other piece of equipment shares the same circuit.
5. For your safety, your treadmill must be connected to a properly fitted plug with an earth connection that complies with currently applicable regulations. If in doubt, get a qualified electrician to check that the treadmill is properly installed. Do not modify the plug supplied with your treadmill in any way.
6. If you need an extension, only use one with an earth connector and a cable with three 2.5 mm² wires, that is no more than 1.5 metres long.
7. Never use this machine with a damaged electrical cable or plug or if it has been in contact with water.
8. Immediately after each use and prior to any cleaning, assembly or maintenance operation, turn off the master switch and disconnect the treadmill from the mains.
9. Never leave the treadmill plugged in without supervision.
10. Never remove motor hood. Adjustments and modifications other than those described in this manual must only be carried out by an authorised technician. Failure to follow these safety instructions may result in serious injuries, even death.
11. Keeps hands well away from all moving parts. Never place your hands or feet under the walking belt.
12. Replace any worn or faulty parts immediately.
13. Ensure that there is adequate air flow during your exercise session.
14. Wear sports shoes which are in good condition. To avoid damaging your apparatus, ensure that your shoes are free of any debris such as gravel or small stones.
15. Tie up your hair. Do not wear baggy clothing likely to get in your way when exercising. Take off all jewellery.
16. After exercising, wait for the treadmill to stop completely before getting off.
17. After use, remove the safety key from the console and store it in a place which is inaccessible to children.
18. Always stop the machine using the master switch.
19. Always position and store the power cable away from heavy traffic areas.
20. If you want to get off urgently, grab the support rails and place your feet on the foot rails.
21. To perform an emergency stop, remove the safety key.
22. Level of acoustic pressure measured 1 m from the surface of the machine and at a height of 1.6 m above the ground: 60 dBA (maximum speed). Noise emission under load is higher than without load
23. The underside of the belt will have been lubricated during manufacturing. During transportation, some lubricant may have been transferred onto the top of the belt and the cardboard. If there is any lubricant on top of the belt, clean the belt using a cloth and non-abrasive cleaning product.
24. This equipment is for household use only (class H).
25. If you experience dizziness, nausea, chest pain, or any other abnormal symptom, stop exercising immediately and consult a doctor.
26. The machine must be placed on a stable, flat, horizontal surface.
27. The customers are not allowed to open the fixed guards on front roller, under any circumstances

■ START-UP

1. Plug in the power cable.
2. Switch the circuit breaker, located near the power cable, to the I position.
3. Position yourself on the treadmill, with your feet on the foot rails.
4. Attach the safety key clip to your clothing.
5. Insert safety key into designated slot on the console.
6. Your screen will light up and the treadmill is ready to us

■ USING THE CONSOLE

- km/h (mi/h)** Speed
- AVG** Average speed
- km (mi)** Distance covered
- Total** Distance covered since the treadmill was first switched on
- Time elapsed in hours: minutes: seconds
- kcal** Estimation of calories burned
- Continuous display during the training session
- Flashing display in pause mode for 3 seconds following startup
- Maintenance indicator (see MAINTENANCE paragraph)

A brief push starts the treadmill (start speed = 0.5 km/h).
 A brief push while the treadmill is running will pause it.
 A brief push while the treadmill is paused will restart it (at the same speed as before the pause).
 Holding the button down (3 seconds) will stop the treadmill and display a summary of the training session.

MI / KM

Increases the speed by 0.1 km/h increments
 Decreases the speed by 0.1 km/h increments
 Allows you to select the measurement unit (see cursor at the back of the console)

SETTING THE SESSION TIME

Press the **+** and **-** buttons at the same time. .
 Enter the time of your session using the **+** and **-** buttons (from 10 minutes to 2 hours).
 Press the button to start your training session.
 Press the **+** and **-** buttons at the same time to cancel the setting.

■ **MAINTENANCE**

Regular maintenance is necessary to maintain the performance of the machine and to extend the life of the product.
 Failure to comply with maintenance recommendations may result in premature wear, permanent damage and voiding of the guarantee. If you have any questions, please contact your local DECATHLON store or visit our website, www.domyos.com.

Please note: The maintenance indicator appears every 200 kilometres. To make it disappear, remove the safety key from the console. Press the **+** and **-** buttons at the same time and, while holding them down, re-insert the safety key.

The following can help reduce treadmill noise:

1. Tighten the screws and bolts once a month.
2. Lubricate the running belt after 200 hours of use. Process described below: "Lubrication of the running belt."
3. Place a suitable floor mat (such as the Domyos Training Mat) under your treadmill.

WEEKLY MAINTENANCE

Inspect and, if necessary, tighten all external parts of the treadmill.

Cleaning:

- Switch off and then unplug the treadmill.
- Apply a small amount of mild, multi-purpose cleaner, using a 100% cotton cloth. Do not spray directly onto the walking belt and do not use acid or ammonia-based cleaning products.
- Wipe the console and screens.
- Remove any dust and grime from the hand rails, uprights, foot rails, frame and motor hood. In addition, wipe the deck along the sides of the walking belt. Do not wipe under the walking belt.

Adjusting the position of the walking belt (centring):

Locate the coloured markings at the front of the treadmill.
 If you can only see the green colour on both sides, the belt is correctly centred.
 If you see some red, the belt needs to be recentred. This prevents damage to the walking belt and untimely stopping.

- Run your treadmill at 4 km/h (2.5 mph) and stand behind the machine.
- **The belt is skewed to the left:**
Turn the left adjusting screw clockwise half a turn.
- **The belt is skewed to the right:**
Turn the right adjusting screw clockwise half a turn.
- Let the treadmill run long enough for the belt to reposition itself (1-2 minutes) and repeat the procedure if necessary.
- This centring operation must only be made occasionally to avoid damaging your treadmill.

Adjusting the tension of the walking belt:

The walking belt is susceptible to wear and tear and can stretch over time. Re-tighten it as soon as it begins to slip (skidding feeling with sudden changes in speed).

- Turn both adjusting screws by half a turn clockwise.
- Repeat procedure if necessary but make sure that the belt is not too tight. The belt is correctly tightened if you can lift the edges by 2 to 3 centimetres on each side.

MAINTENANCE EVERY 200 HOURS OF USE OR EVERY 1500 KM

To find out the duration of use and the distance travelled since the treadmill was started up, refer to the INFORMATION MODE section.

Lubricating the treadmill belt:

It is important to lubricate your treadmill in order to reduce friction between the walking belt and the deck. If you note traces of silicone on the inner surface of the walking belt (damp, wet and slightly greasy surface), there is no need to lubricate.

If the belt and deck are dry:

- Switch off treadmill and unplug.
- Lift the edges of the walking belt and coat the inner surface with silicone.*
- Plug in treadmill.
- Before using, run the walking belt at 4km/h (2.5 mph) for 10-20 seconds.
- Your treadmill is now ready to use!

* One lube application usually requires between 5 and 10 ml of silicone. Warning: a surfeit of silicone can adversely affect the functioning of your treadmill (risk of slipping).

To purchase belt lube, please contact your local DECATHLON store.

■ DIAGNOSING ERRORS

The treadmill doesn't switch on:

1. Check that the power cable is plugged into a functioning wall socket (to check if the wall socket is working, plug in a lamp or other electrical device).
2. Check that the other end of the power cord is connected to your treadmill.
3. Check that the main switch near the power cord is set to I.
4. Check that the safety key is pushed fully home in the console.

The belt slows down when you walk on it:

- If you need to use an extension cable, you must only use a cord with 3 x 1 mm² conductors (size 14), which is no longer than 1.5 m (5 ft) in length.
- If the walking belt is over-tightened, your treadmill performance may be adversely affected and the walking belt may become damaged. To adjust the tension of the belt, refer to the paragraph entitled MAINTENANCE.

If the problem persists, contact the after-sales service team (see last page of instructions).

The running mat slows down or judders:

- Check the tautness of the mat by referring to the MAINTENANCE paragraph

Rubbing noise:

- Check that the running mat is properly centred (the mat must not rub against the sides)
- Check that the running mat is properly positioned (it must not slip)

Noise from the structure (creaking):

- Check, and if necessary, tighten all the external parts of the running mat.
- Structure-borne noise (grinding):
- Check and, if necessary, tighten all external parts of the treadmill

If the problem is still not solved, contact customer service (see the last page of the user manual)

■ ERROR CODE

Er-1, Er-2, Er-3, Er-4, Er-5, Er-8, Er-9: Contact the after-sales service (see the final page of the instructions).

Er-6: Check that nothing is hampering the movement of the walking belt. If the problem persists, contact the after-sales service.

Er-7: Get your electrical installation checked by a qualified electrician and then contact the after-sales service.

■ USE

If you are a beginner, start by training for several days at a gentle pace; don't push yourself and rest if necessary. Gradually increase the frequency and duration of sessions. Ensure the room in which you are exercising is well ventilated.

**Stretching/warming up: Gentle effort for a minimum of 10 minutes**

To maintain fitness or for rehabilitation, train every day for at least 10 minutes. This type of exercise provides a good, gentle work-out for muscles and joints and can be used as a warm-up activity before more intense physical exercise.

**Aerobic exercise for weight loss: Moderate effort for 35 to 60 minutes**

This type of training is an effective way of burning calories. There is no point in pushing yourself unduly; for the best results the most important thing is frequency of exercise (at least 3 times a week) and the duration of the session (35 to 60 minutes). Exercise at average intensity (moderate effort so you are not out of breath).

In order to lose weight, as well as taking regular physical exercise, it's essential to follow a balanced diet.

**Aerobic training for endurance: Sustained effort for 20 to 40 minutes**

This type of exercise helps strengthen the heart muscle and improves your respiratory health. Exercise at least 3 times a week at a steady pace (rapid breathing). As your training progresses, you will be able to maintain this effort for longer, and at an improved pace.

Training at a faster pace (anaerobic and in the red zone) is reserved for athletes and requires special preparation.

Cool down

After each training session, walk slowly for a few minutes to bring your body gradually to rest. This cool down phase helps your cardiovascular and respiratory systems, blood circulation and muscles return to normal. It also helps to eliminate side effects such as the accumulation of lactic acid which is one of the major causes of muscle pain (cramps and stiffness).

Stretching

Stretching exercises reduce muscular stiffness due to the accumulation of lactic acids and stimulate blood circulation.

Go to www.domyos.com for more advice on stretching exercises

■ COMMERCIAL GUARANTEE

DOMYOS guarantees this product in normal conditions of use, 5 years for the structure and 2 years for other parts and labour, from the date of purchase, the date on the receipt is binding.

DOMYOS'S obligation with regards to this guarantee is limited to the replacement or repair of the product, at the discretion of DOMYOS.

This guarantee doesn't apply in cases of:

- Damage caused during transportation
- Use and/or storage outside in a damp environment (excluding trampolines)
- Poor assembly
- Misuse or abnormal use
- Poor maintenance
- Repairs made by technicians not approved by DOMYOS
- Use in excess of 5 hours per week

This guarantee does not cancel the legal guarantee applicable in the country of purchase.

To take advantage of your product's guarantee, consult the last page of the user's guide.
